DATA MODEL

Length of Stay & Date Table

Length of Stay Calculation

Length of Stay is computed as the day difference between admission and discharge, enabling accurate room charge calculations.

```
Length of Stay =
DATEDIFF(
  visits[Admitted Date],
  visits[Discharge Date],
  DAY
)
```

Date Table Structure

A dedicated Date table enables filtering by year, quarter, and month for time-based charge analysis.

```
DateTable =
ADDCOLUMNS(
 CALENDARAUTO(),
 "Year", YEAR([Date]),
 "Month", FORMAT([Date],"mmm"),
 "MonthNum", MONTH([Date]),
 "WeekDay", FORMAT([Date],"ddd"),
 "WeekDayNum", WEEKDAY([Date]),
 "Qtr", "Q-" & FORMAT([Date],"Q"),
 "WeekType",
 IF(WEEKDAY([Date])=1 ||
 WEEKDAY([Date])=7,
 "WeekEnd","WeekDay")
)
```

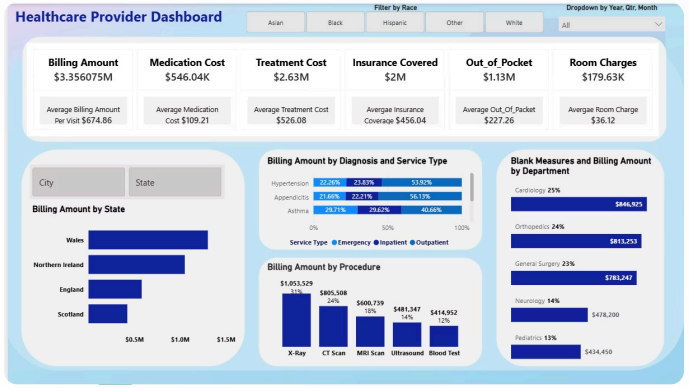
VISUALIZATION

Billing Analytics Dashboard

Charts visualize billing amounts across City, State, Department, Diagnosis, and Procedure — giving providers a comprehensive view of performance and efficiency.



Geographic Analysis

Billing breakdowns by City and State reveal regional revenue patterns.

Clinical Breakdown

Costs segmented by Department, Diagnosis, and Procedure surface high-cost areas.

Time Intelligence

Yearly, quarterly, and monthly filters enable trend analysis and forecasting.
